Virginia

The Blue Roman Hyacinth

A Showy Newer Variety for Growing Indoors

This Blue Roman Hyacinth which has been successfully grown for the last few years comes from France. It is a cross between a very fine porcelain blue Dutch Hyacinth and the Early White French Hyacinth from which it receives its daintiness and earliness of bloom.

Virginia has much larger bells and the stem is longer than the White Roman. It will produce two to three perfect flower spikes to the bulb.

Virginia will bloom for Christmas, in the house. If not required at that time it may be grown cool and flowered when wanted. Anyone will succeed with it.

Dreer's Super Giant Trumpet

Herbert Smith—light yellow perianth with deeper yellow trumpet

Herbert Smith. The picture above gives a good idea of the splendid form of this magnificent Narcissus but it fails to adequately convey the huge size of the blooms which measure 5 to 6 inches across. Surrounded by a light yellow perianth is a beautiful, long, fluted yellow trumpet of graceful form. It is a strong grower carrying its blooms on long, strong, and heavy stems. One of the finest. 3 for 45c; 12 for \$1.50; 100 for \$11.00

Harold Beale—light yellow perianth and yellow trumpet

Harold Beale. A very remarkable variety combining a well-shaped light yellow perianth with a rich yellow trumpet. The combination of colors is exquisite and charming and the flower as a whole is a perfect picture of poise. We highly recommend it as a very outstanding and dependable variety. 3 for 45c; 12 for \$1.50; 100 for \$11.00.

These Super-Giant Trumpet varieties are quite distinct from the Giant Trumpets which we have placed in a class by themselves (see page 13). The Super-Giants have flowers which are truly of huge size with trumpets which besides being very large are outstanding, forming broad, flaring trumpets with attractively undulated edges. Like all Narcissus they are easy to grow and the bulbs should be planted in the fall in a well-prepared soil at a depth not less than 4 times the height of the bulb. They are perfectly hardy and may remain for years in the same spot. Other flowers may be grown right on top of them on account of the bulb being located below the root system of our average annual or perennial plants. You will find in our list all the very finest varieties.

Every year we receive many favorable expressions from our customers telling us of the exceptionally fine results they have from the high quality Narcissus bulbs which we are sending out. On some varieties we offer *extra double-nosed bulbs* which are still larger and unexcelled in every way.

King Alfred. This truly wonderful Daffodil is considered the best and finest deep golden yellow trumpet variety in existence. It is a tall, strong grower carrying its huge, well formed flowers atop a strong stout stem. The entire flower is a uniform rich golden yellow of great appeal. Has well shaped perianth petals and a magnificently frilled trumpet that combines with the perianth into a perfect flower.

Round bulbs: 3 for 45c; 12 for \$1.50; 100 for \$11.00.

Extra double-nosed bulbs: 3 for 60c; 12 for \$2.00; 100 for \$15.00.

Mrs. Krelage—A combination of white and cream

Mrs. Krelage. What a glorious and exquisite flower with a charm that attracts and holds the admiration of everyone. The long-stemmed blooms are equally fine for garden display, for cutting, and the variety may be forced gently. Has a pure white perianth and a lovely creamy white trumpet with a gracefully curled brim which turns white as the flowers mature. 3 for 60c; 12 for \$2.00; 100 for \$15.00.

Four Old Favorite Large Trumpet Narcissus

For Beds, Borders, and for Naturalizing

We have placed these four varieties of Giant Trumpet Narcissus in a class by themselves as they are sufficiently different from the Super-Giant Trumpet varieties listed on the previous pages to deserve a special classification.

All four are older varieties which in their days were the largest to be had in the trumpet class but today they are surpassed by the others as far as size is concerned. But what they lack in size they make up in hardiness and persistence. For that reason they are unsurpassed where beds and borders are wanted that will not only give blooms for many years to come but where the number of bulbs will increase every year until the planting becomes so crowded that replanting will be necessary. They are superb for naturalizing.

Emperor. This grand variety though surpassed in size by some of the newer ones is one of the finest Daffodils in cultivation. Has a rich primrose perianth and a substantial pure yellow trumpet of large size. Excellent for bedding, naturalizing, or pot growing indoors. *Extra double-nosed bulbs:* 3 for 45c; 12 for \$1.40; 100 for \$10.00.

Empress. A fitting companion to Emperor and of as strong, robust growth. The fine large perianth is snow white contrasting well with the rich yellow trumpet which is attractively serrated and flanged at the edges. *Extra double-nosed bulbs:* 3 for 45c; 12 for \$1.40; 100 for \$10.00.

Giant Princeps. Extra fine for naturalizing and for forcing indoors. The sulphur white perianth harmonizes well with the rich yellow trumpet. It is a most popular variety. *Extra double-nosed bulbs:* 3 for 35c; 12 for \$1.10; 100 for \$7.50.

Golden Spur. The most popular of the golden yellow trumpets. Free blooming and splendid for cutting. Blooms early and gives a magnificent display with its rich deep yellow flowers of very graceful form. Easy to grow and long-lived. *Round bulbs:* 3 for 30c; 12 for \$1.00; 100 for \$7.25. *Extra double-nosed bulbs:* 3 for 40c; 12 for \$1.30; 100 for \$9.00.

Three Fragrant Narcissus for Growing Indoors in Pebbles and Water

Paper White Polyanthus Narcissus

Narcissus polyanthus Large-Flowering Paper White

This is everybody's flower for forcing in the house during the winter and early spring. Very easy to grow in water and pebbles, in prepared bulb fiber, or in pots filled with soil.

Best results are obtained if the first plantings are not made until November. They always do best if grown in a cool room. It is advisable to purchase sufficient bulbs early in the season to permit several plantings during the winter and spring. The bulbs will keep in perfect condition in a cool dry spare room or cellar. The later the season the quicker they will come into bloom requiring only 12 days to come into flower if planted around Easter.

Mammoth Bulbs. 3 for 18c; 12 for 60c; 100 for \$4.00

As easy to grow as the Paper Whites but just a little slower. Produces large clusters of rich golden yellow flowers with a deep orange-red cup. The blooms have an exquisite fragrance which however is quite different from that of the Paper Whites. **Monster bulbs** 3 for 50c; 12 for \$1.75; 100 for \$12.00.

Chinese Sacred Lily Narcissus Tazetta orientalis

Joss Flower, Flower of the Gods, Soy Sin Far

Of even stronger habit than the Polyanthus Narcissus with showy blooms combining a pure white perianth with a golden cup. Its fragrance is as rich as the others but distinct in sweetness and character. Excellent for growing in pebbles and water, in soil-filled pans, or in prepared bulb fiber. We are pleased to be able to again offer our patrons this grand old favorite which is so easy to grow. 3 for 50c; 12 for \$1.75; 100 for \$12.00.

Hardy Flowering Bulbs

Even before the last of the snow has melted the little Snowdrops lure us into the garden as they bravely lift their white bells above the remaining snow. Winter Aconite too with its bright yellow bloom often flowers as early as the Snowdrops. While these are still in full bloom the showy little Chionodoxa or Glory of the Snow lifts its bright blue flowers above the rich green foliage. The earliest of the Crocus that brighten the garden are followed shortly by Scillas, Grape Hyacinths, and Giant Crocus. Soon afterwards the Fritillaria and Lily of the Valley make their debut with Anemone, Calochortus, Erythronium, Leucojum, and Ranunculus to succeed them.

Hardy Amaryllis Halli—*Lycoris Squamigera*

Few gardeners know that there is a real hardy Amaryllis for garden planting. Plant the bulbs 8 inches deep and cover the ground securely with leaves during the winter months. The bulb starts to make foliage in the spring but by July this will have died down. The greater is the surprise when soon afterwards sturdy, strong spikes arise from the soil, bearing beautiful, large, fragrant pink blooms arranged in showy large clusters. Planted in well-drained soil and in a sunny position the bulbs are permanent to give yearly their interesting display of flowers. \$1.00 each.

Giant Poppy-Flowered Anemones

These are easy to grow in a cold frame or in the garden if protected by a bottomless box sunk a few inches into the soil and covered with a pane of glass. Also splendid for greenhouse or conservatory.

This is a famous Irish strain of semi-double flowering Anemones coming in a multitude of charming colors ranging from pure white to the deepest maroon and including a wide range of intermediate shades such as rose, red, pink, blue, etc. 3 for 18c; 12 for 65c; 100 for \$4.00.

Brodiaea Δ

Mixed. These are lovely little bulbs native to our western states. They bloom in the spring and do well in shaded positions as under trees or in the gritty crevices of a deep rock garden pocket. Plant them as early in the fall as available and cover 2 inches deep with fine soil. They bear their showy little star-shaped blooms during May and June. Leave them alone after planting as they are perfectly hardy just giving them a little winter protection. 3 for 18c; 12 for 60c; 100 for \$4.00.

Calochortus Δ

Mariposa or Butterfly Tulip

Mixed. Another class of western bulbs which have a charm all their own. Those we offer here in mixture are perfectly hardy or they may also be grown in cold-frames or pots. Plant the small bulbs as soon as they can be obtained in the fall and cover them with about 2 inches of fine soil. Good drainage is needed but any good garden soil is suited for them. Space the bulbs about 2 inches apart in a sheltered spot where they receive some sunlight. They are always admired for their rich color and beautiful form. 3 for 25c; 12 for 75c; 100 for \$5.00.

Camassia Leichtlini

Beautiful Lilies—LILIUM—

Among the most beautiful plants we can have in our gardens are the Lilies. They are so easy to grow and give a wonderful effect. Wherever one sees them they universally elicit admiration for they are indeed glorious in every way. As they take little room they may be used generously for planting in the perennial border where their towering spikes reign supreme during the summer. In fact the shade cast upon the soil by low growing perennials creates ideal conditions for Lilies.

Planting Lily Bulbs

Please note the delivery date for the different varieties which depends upon the time the bulbs mature. Unless you are prepared to care for those received late we suggest that you buy in spring as the bulbs are so perishable that we cannot accept their return. Cover the soil where Lilies are to be planted with hay, straw, etc., to keep the frost out until planting time.

Dreer's Choice Hardy Shrubs

for Fall Planting

Shrubs are a most essential part of the well planted home and those who desire something different will find in our list many splendid varieties which are not used as freely as the popular Spiraeas, etc. These will give a special charm to your planting. The late autumn is the ideal time to plant shrubs. They usually can be dug after the middle of October and where frost enters the ground previous to that time a few burlap bags, hay, straw, or manure will keep the soil workable until the plants arrive.

As growth varies according to conditions we give the approximate height as follows: D=Dwarf (less than 4 feet high); M=Medium tall (4 to 8 feet high); T=Tall (8 feet and taller).

Althea—Rose of Sharon (T)

William R. Smith. The glistening pure white single flowers are of giant size, fully 4 inches in diameter. They open out flat or salver-shaped quite different from the older types which only partially expand. These are produced in great profusion from early in July until late in September. Strong plants, size 3 to 4 feet, 75c each.

Andromeda—Pieris (D)

Red-Leaved Japanese Barberry

New Red-Leaved Japanese Barberry

Berberis Thunbergi atropurpurea (M)

Similar in all respects to the green-leaved Japanese Barberry which is so popular for mixing in the shrubby border, as single specimens, or for planting in clumps on the lawn, as well as for foundation plantings and for hedges, but the foliage of this new variety is of a rich, lustrous, bronzy red similar to the richest red-leaved Japanese Maples. As the season advances this new Barberry becomes more brilliant and gorgeous and in the fall its foliage changes to shades of vivid orange, scarlet, and red.

All that is required to develop its brilliant coloring at all seasons is that it be planted in full exposure to the sun.

All Flower Seeds offered in this catalog are sent "Postpaid" to any post office in the United States or its possessions.

Early autumn is a favorite time with many gardeners to sow perennial flower seeds. To hasten them along a cold frame or a similar temporary structure should be used.

But there are a number of others, which give best results if the seed is sown late in the fall. They need the action of frost to sprout freely during the coming spring. We have marked this type in our list with a star (*).

To help our customers in selecting varieties for the rock garden we have used the symbol Δ to identify them at a glance. These varieties also are splendid for dwarf beds, borders, or for edgings. Plants suited for the semi-shade are marked \odot and those that will grow in deeper shade \bullet . Practically all of these also do well in a sunny position.

Early Fall is the Ideal Time to Sow

DREER'S LAWN GRASS MIXTURES

The ideal time to sow a new lawn or resow an old one is early fall. At no other time of the year is the weather so favorable to the germination of the seed and the development of the young plants. Rain fall usually is plentiful yet there are no torrential rains like those of spring. Sunshine is abundant. It is a warm yet kindly sun that does not burn like the scorching rays of late spring and summer. Fall grass and crab grass have done their worst for the season and cannot sprout unexpectedly to choke out the finer growth. Summer droughts are almost a full year away and by that time the root system of the new lawn will be well established.

“The Dreer” Lawn Grass *The Unequaled Mixture for a Beautiful Lawn*

The first and most important requisite for the establishment of a really good lawn is the correct choice of grass seed varieties which make a dwarf compact growth and have a rich deep green color. The Dreer Lawn Grass has been carefully prepared in accordance with our own formula which has proved to give a rich green, smooth, velvety lawn of fine texture altogether free from grasses which are inclined to produce clumps or knots. The grasses included are permanent and of good color. They are all strictly lawn grasses.

Each variety of grass in this composition is included for a special purpose. The strong fibrous roots of certain ones take hold of the soil and contribute considerably toward the permanence of the sod. Other grasses in the mixture are of a creeping habit. They are most essential as they quickly fill up the entire surface and weave the sod into a thick carpet of green. And there are others which help the density and protect the lawn against rain damage. The Dreer Lawn Grass is the ideal mixture for small and large lawns.

Pt. 25c; qt. 45c; 2 qts. 85c; 4 qts. \$1.40; peck \$2.75;
½ bu. (10 lbs.) \$5.25; bu. (20 lbs.) \$10.00; 100 lbs. \$48.00, prepaid.

“Evergreen” Lawn Grass *A Fine Mixture of Good Permanence*

This special mixture, though less expensive than The Dreer Lawn Grass, produces a beautiful and permanent lawn. It is made according to our own formula and is composed of grasses which are adapted to the purpose of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this brand we are careful to use only seed that has been thoroughly re-cleaned.

Pt. 20c; qt. 35c; 2 qts. 65c; 4 qts. \$1.25; peck \$2.25; ½ bu. (10 lbs.) \$4.25; bu. (20 lbs.) \$8.00; 100 lbs. \$38.00, prepaid.

“Fairmount Park” Lawn Grass *Our Popular Low-Priced Mixture*

This popular, low-priced mixture is well suited to various soil conditions, giving good results even on small city grass plots where the soil is frequently stiff and heavy. It will form a thick turf in a very short time and is well suited to lawns and other spaces receiving considerable hard wear. It also is valuable for use on embankments and terraces, also for renovating old, worn-out lawns.

Pt. 15c; qt. 25c; 2 qts. 50c; 4 qts. 95c; peck \$1.80; ½ bu. (10 lbs.) \$3.50; bu. (20 lbs.) \$6.50; 100 lbs. \$30.00, prepaid.

Grass Mixtures for Special Locations

“Shady Place” Lawn Grass

We highly recommend this special mixture for shaded locations as under trees where the general mixtures usually fail to produce a good thick turf. It contains extra fine, heavy, and choice grass seed which will produce a thick and rich growth of deep green grass of a permanent nature.

Pt. 30c; qt. 55c; 2 qts. \$1.00; 4 qts. \$1.80; peck \$3.00; ½ bu. (10 lbs.) \$5.75; bu. (20 lbs.) \$11.00; 100 lbs. \$52.00, prepaid.

“Terrace” Lawn Grass

Terraces and steep slopes require a special mixture of lawn grasses that have an abundant and deep root system to hold the soil in place and prevent washing by heavy rains. Our terrace grass is a carefully prepared combination including Bent Grass that makes a strong mat of rich green turf.

Pt. 25c; qt. 45c; 2 qts. 85c; 4 qts. \$1.50; peck \$2.75; ½ bu. (10 lbs.) \$5.25; bu. (20 lbs.) \$10.00; 100 lbs. \$48.00, prepaid.

“Seashore” Lawn Grass

A rich green lawn is especially desirable at the seashore but success depends entirely upon sowing mixtures that contain special grasses suited to such locations. As grass will not grow in sand it will be necessary to topdress the surface with from two to four inches of good soil.

Pt. 25c; qt. 45c; 2 qts. 85c; 4 qts. \$1.50; peck \$2.75; ½ bu. (10 lbs.) \$5.25; bu. (20 lbs.) \$10.00; 100 lbs. \$48.00, prepaid.

“Golf Links” Grass

For a thick turf that will stand the hard usage suffered by the average fairway, teeing ground, football and polo field, or other athletic grounds, or for a hard wearing lawn Dreer's Golf Links Grass will be found unsurpassed. It forms a thick rich green mat with exceptional wearing qualities.

Pt. 20c; qt. 35c; 2 qts. 65c; 4 qts. \$1.25; peck \$2.25; ½ bu. (10 lbs.) \$4.25; bu. (20 lbs.) \$8.00; 100 lbs. \$38.00, prepaid.

“Putting Green” Mixture

The varieties comprising this mixture are all fine bladed, low growing, and the most hardy kinds that retain their rich green color throughout the season. Also excellent for tennis courts, and wherever a billiard-table-smoothness is necessary. It is a superfine mixture.

Pt. 40c; qt. 75c; 2 qts. \$1.40; 4 qts. \$2.40; peck \$4.50; ½ bu. (12½ lbs.) \$8.50; bu. (25 lbs.) \$16.50; 100 lbs. \$65.00, prepaid.

White Dutch Clover Seed

There are many gardeners who prefer an extra heavy stand of clover in their lawn because of its resistance to heat and its ability to build up the soil. Sow about 2 ounces to each pound of grass seed but sow separately to secure an even distribution.

Oz. 10c; ¼ lb. 30c; ½ lb. 45c; lb. 85c, prepaid.
Not prepaid, lb. 75c; 5 lbs. \$3.50; 10 lbs. \$6.75; bu. (60 lbs.) \$39.00; 100 lbs. \$63.00.
